

FLEX BASE

THE SOLUTION TO REPAIRING ROADS WITH WEAK BASE STRUCTURES.

Flex Base is an emulsion based, cold mix asphalt material that is perfect for roads with a deteriorating base. Its flexibility is what sets it apart from other asphalt paving products – it reverts back to its original structure after freeze-thaw cycles. Flex Base may be applied at ambient temperatures, thereby extending the paving season.

Flex Base

- Flexible material - reverts to its original structure after a freeze-thaw cycle
- Applied at ambient temperatures; extends the paving season
- May be mixed at the job site; reduces hauling costs
- More economical than traditional hot mix paving
- Extends pavement life
